Care instructions for Encore Azalea varieties

Uses: Ideal for specimen planting, mass planting and in gardens and borders.

Position: Full sun to part shade. Tolerates frost and moderate drought (as the plant matures it becomes more drought tolerant). Prefers well drained soils.

Care: Water well for the first year for the plant to fully establish and become more drought tolerant. Top up water in dry periods. Plant in a well mulched garden (chunky mulch is recommended) with the root ball slightly above soil level. If required use slow release fertiliser in spring. For best results prune after spring flowering.
