

Southern Cascade™

Lomandra hystrix 'LHWP' (D)

A weeping Lomandra that handles full sun to heavy shade.

- A more compact form than the standard hystrix, Southern Cascade™ Lomandra is well suited to tropical to cold regions and is ideal for rain gardens.
- Southern Cascade™ Lomandra has large fragrant yellow male flowers that will not produce seed.
- Will handle periods of wet feet and is drought tolerant. It is one of the only native plants able to handle wet heavy shade conditions.
- Can handle periods of moderate frosts, has survived a period of down to -4° celcius.
- When planting make sure a reasonable amount of 8–9 month slow release fertiliser is used, especially in poor nutrient soils.

Note: 'LHWP' is sold under the brand name Tropic Cascade™ in Queensland, Northern and Central NSW. It is ideally suited to both the southern and southern states, so it has been named to suit the different regions.

Description	Weeping <i>Lomandra hystrix</i>
Density	2–6 plants per m ² 1.5–3 per linear metre
Height & Width	60–80cm x 60–80cm (maintains smaller height when cut back every 3–4 years)
