A weeping Lomandra that handles full sun to heavy shade.

- A more compact form than the standard hystrix, Tropic Cascade™ Lomandra is well suited to tropical to cold regions and is ideal for rain gardens.
- Tropic Cascade™ Lomandra has large fragrant yellow male flowers that will not produce seed.
- Will handle periods of wet feet and is drought tolerant. It is one of the only native plants able to handle wet heavy shade conditions.
- Can handle periods of moderate frosts, has survived a period of down to -4° celcius.
- When planting make sure a reasonable amount of 8–9 month slow release fertilser is used, especially in poor nutrient soils.

### Description
- **Weeping Lomandra hystrix**

### Density
- 2–6 plants per m²
- 1.5–3 per linear metre

### Height & Width
- 60–80cm x 60–80cm (maintains smaller height when cut back every 3–4 years)

### Flowering
- Sterile male yellow flowers from Sep–Nov

### Best Planting Time
- March–November

### Uses
- Specimen/mass plantings for residential or commercial use

### Position
- Full sun to heavy shade
- Tolerates humidity, drought & moderate frost

### Soil Type
- Most soil types

### Care
- Fertilise with slow release fertiliser; cut back 30cm above the ground every 3 to 7 years

### Where It Works
- NSW, QLD, ACT, VIC, SA & WA
