

Grass Tree 310™

Lomandra 'LM301' (D)

STRAPPY LEAF PLANTS

Quick-growing native *Lomandra* mimics a young grass tree. Drought-tolerant and root-rot resistant with fine, upright foliage and yellow flowers.

- Fast-growing Australian native look: Achieve the classic look of young grass trees within 1-2 years.
- Unique fine leaf foliage: Taller, more upright dark green leaves.
- Highly attractive to insects: Abundant yellow flowers with higher pollen and insect counts.

Description	Strappy clumping native plant with upright foliage, similar to a young grass tree. Feeds beneficial beetles when they can't find pests to eat.
Density	3-5 plants per m ² for mass planting
Height & Width	700mm high x 600mm wide
Flowering	Produces abundant yellow flowers that attract pollen-feeding insects
Best Planting Time	Spring or autumn
Uses	Ideal for architectural shape, borders, understory, mass planting, feature plants in gardens or pots
Position	Prefers full sun to moderate shade; drought and frost-tolerant; withstands periodic flooding but avoid regular wet conditions
Soil Type	Tolerates most soils, but avoid consistently wet areas
Care	Water as required for 8-13 weeks until established; plant in well-mulched soil
Where it Works	ACT, VIC, SA, WA, TAS, NSW (south of Coffs Harbour), handles Sydney's humidity but not Queensland's
